

SASHAS BLEND POWDER

Sashas Blend assists in keeping your dog active, pain free and healthy!!!

Sasha's Blend is 100% pure and natural with no additives or fillers. The unique combination of marine concentrates in Sasha's Blend contain a wide range of nutrients that may be beneficial in relief of arthritic symptoms in dogs.

Sasha's Blend may be beneficial in maintaining normal function of joint tissue, promote joint mobility and enhance health and well being of dogs. It may also be used as a tonic for dogs that exercise heavily or are involved in high performance activities such as racing. Especially useful for dogs who suffer from arthritis, have joint injury or general wear and tear. It also provides an energy boost and conditions the overall body and coat.

Sasha's Blend is suitable to give to dogs of all ages with hip dysplasia, joint injuries or to dogs slowing down with arthritis. It's also suitable to give to young dogs particularly from the age of 6 as it may help reduce the risk of joint problems later on in life.

Active Constituents: Stabilised Green Lipped Mussel 150g, Abalone 50g, Shark Cartilage 50g.

Administration: Mixed well with food or drink.

Dosage: Dogs: up to 10kg; 1/2 teaspoon daily. 11 to 20kg; 3/4 teaspoon daily. 21-30 kg; 1 level teaspoon daily. 31-40 kg; 1 1/4 teaspoons daily. 41-50kg; 1 1/2 teaspoons daily.

Note: give half the recommended dose for the first week of use.

1 x 250g tub contains approx 110 level teaspoons of powder. This will last a 20kg dog approximately 145 days! Compared with other joint health products, Sasha's Blend is very cost effective.

Why was Sasha's Blend developed?

Sasha had always been an active dog. At eleven years of age she began to show signs of ageing and wear and tear on joints became evident. After consultation with veterinarians and lengthy research and field trials, Sasha's Blend was developed. This natural supplement has helped Sasha maintain her mobility and quality of life.

How do I give it to my pet?

Sasha's Blend is easy to give your pet. It is in powder form and pets generally love the taste. Depending on the weight of your pet for instance a 30kg dog would need one teaspoon of powder mixed with food or drink once a day. For the first week we recommend start on half the dose and then build up to the full dose.

What if my pet does not eat his food with Sasha's Blend™ in it?

If giving a dry food diet, or your pet is a fussy eater, mix the powder with moist food or liquid or roll into a treat eg: bread/ham/cheese.

If this fails mix into a paste as follows:

Spoon a weeks worth into a cup and mix into a dry paste with a little olive oil or natural yoghurt. Roll into balls and store in an airtight jar in the fridge. These then can be given directly into the mouth or more easily hidden in food or a treat.

Can I bake treats that include Sasha's Blend™?

NO YOU CANNOT!! Sorry, but the actives are very, very delicate and are damaged by any heating in food and or water above 30°C.

If your pet won't eat it mixed in with their food then make it into balls and hide it in a treat. You can add it to warm food (below 30°C) just before serving but please don't cook it in anything.

How long does it take to work?

There should be improved joint function and restoration of mobility within two to four weeks of taking Sashas Blend™.

In some animals a positive effect can be seen in as little as three days. In chronic cases it may take up to two months to see a significant improvement.

Can Sashas Blend™ be used in pregnant animals?

Sashas Blend is not recommended for use in pregnant animals.

Allergy precautions

Do not give to your animals that have an allergy to shellfish or marine products.
