

VETSENSE NEUTRACID

Product Description

Indications & Actions

Aids in the prevention and treatment of acidosis and muscle cramping in horses and greyhounds. Alkaliniser, thirst stimulating agent and sodium source.

Neutracid exerts a mild diuretic and neutralizing effect on acidic substances accumulating in the muscles and blood stream after prolonged exercise and this may impair normal muscular function and therefore performance in the racing animal.

Used in conjunction with a daily ration of salt and free access to water, it is an effective treatment for both greyhounds and horses suffering from dehydration.

Due to its ability to alkalinize urine, it may be prescribed as an adjunct to specific therapy to treat bladder and urinary tract infections. Greyhounds suffering from cystitis may have urine that is alkaline and a veterinary surgeon should be consulted for proper treatment.

Active Constituents

Sodium Acid Citrate 285g/L

Warnings

Animal owners should only use VETSENSE NEUTRACID to treat disease conditions after consulting a veterinary surgeon. Do not use in cases of cystitis associated with alkaline urine or severe hypokalaemic states.

Directions for Use

Greyhounds

4mL added to the food while the dog is in hard work, 6mL over the tongue by oral syringe following hand slips, trials or racing.

Horses

25 to 28mL added to the feed. Following fast work or racing, give 50mL orally by syringe over the back of the tongue. Repeat daily or as required.

Presentation

5L and 20L
