

TRIPART INJECTION AND PASTE

OPTIMISE MUSCLE METABOLISM
AND REDUCE TYING UP

OTC

Supplement to optimise muscle function and recovery and to reduce the risk of Tying-Up

COMPOSITION

Potassium aspartate 20 mg/mL, Magnesium aspartate 20 mg/mL, Nicotinamide (Vit B3) 60 mg/mL, L-arginine HCl 100 mg/mL, L-lysine HCl 50 mg/mL, Selenium (as sodium selenate) 1 mg/mL, Cyanocobalamin (Vit B12) 500 µg/mL

Paste also contains:

Adenosine triphosphate 2 mg/g, Uridine triphosphate 1 mg/g

ACTIONS

Tripart is a supplement to support muscle function and recovery during training and strenuous exercise. Tripart is a blend of essential co-factors to ensure that muscle metabolism is optimised, and that energy supply to muscles is adequate, to help reduce the risk of lactic acidosis, muscle fatigue and Tying Up. Provision of essential co-factors and nutrients at the correct time, and in the correct amounts, reduces the risk of muscle damage and decreased performance.

How Does It Work?

ATP is the essential chemical for muscle contraction, releasing energy when it is broken down to ADP. The aspartates improve endurance by decreasing blood lactate and ammonia, thus delaying fatigue. Vitamin B3 helps in increasing the use of glycogen for energy, and arginine acts as a vehicle for transport, storage and excretion of nitrogen. Lysine is important in muscle repair. Selenium is an essential element of the enzyme which helps remove the free radicals produced during severe exercise. Vitamin B12 is essential for red blood cell turnover.

Key Features & Benefits:

- Tripart paste supplements ATP to improve available energy supply to muscles.
- Tripart assists muscle repair and recovery after exercise.
- Tripart reduces the risk of tying up or cramping.
- Tripart optimises energy supply to hard working muscles.
- Tripart is useful to prevent fatigue and stress when travelling horses or dogs long distances.

DOSAGE AND ADMINISTRATION

Injection: Administer by intramuscular or subcutaneous injection.

Horses: Give 5mL per 100kg bodyweight once weekly or as directed by a veterinary surgeon.

Dogs: Give 0.5mL per 10kg bodyweight once weekly or as directed by a veterinary surgeon.

Paste: **Adult Horses:** Give 10-15 mL once weekly or as directed by a veterinary surgeon.

Dogs: Give 1 mL per 10 kg bodyweight once weekly or as directed by a veterinary surgeon.

WARNINGS

Injection: Meat Withholding Period (Horses): Nil

PRESENTATION

100mL sterile glass multi-dose vial.
250g paste pot with syringe.

STORAGE

Store below 25°C (Air Conditioning). Protect from light.

AVAILABILITY

For General Sale (APVMA 50237 [Injection]).

NOTES

If used in performance animals, the regulations of the relevant authorities regarding medication should be observed

HANDY HINT

Tripart can be used to help delay Tying Up or cramping. This will improve muscle recovery after hard work, especially when combined with AMP-5, Energetic, and Recovery Paste post-event. Tripart is regularly used before strenuous exercise for muscle energy support in combination with products such as AMP-5, L-Carnitine or Mitochondral depending on requirements.
