

# Folic B12 Injection

**ACTIVE INGREDIENTS:** Each mL contains Folic Acid 15mg/mL  
Cyanocobalamin 500 µg/mL

**DESCRIPTION:** **Value Plus Folic B12 Injection** is a folic acid and vitamin B12 supplement for horses and dogs. Folic acid and vitamin B12 are required for the prevention and treatment of macrocytic anaemia. Macrocytic anaemia is a result of folic acid and vitamin B12 deficiency.

**PACK SIZE:** 100mL multi-dose bottle

**DIRECTIONS FOR USE:** Administer by intramuscular injection twice weekly or as directed by a veterinary surgeon.

**Horses:** 5 - 10mL or as required

**Dogs/Greyhounds:** 1 - 2mL or as required

**SPECIAL FEATURES:** Both folic acid and vitamin B12 are beneficial for the formation of red and white blood cells as well as for general haemoglobin production. Vitamin B12 is also an essential component for the formation of folic acid.

Folic acid (or folate as it is also known) is B-group vitamin. Like all other B-group vitamins, it is water soluble and so is unable to be stored by the body. Because of this, it is important to supplement with folic acid. Although found naturally in fresh green feeds, folic acid may still be deficient as processing, cooking and storage all play a damaging role to these naturally found folate levels.

Folic acid has been shown to aid in performance of animals and helps with general metabolism.

Vitamin B12 also plays a role in general metabolism as well as with the reproductive and nervous function. Vitamin B12, in the form of Cyanocobalamin, also contains cobalt in its structure, which helps it to synthesise in the gut of an animal. This synthesis of cyanocobalamin (B12) is greatly affected by the use of antibiotics, sickness and general stress. By using a supplement containing cyanocobalamin (B12), this synthesis is maintained.

**Value Plus Folic B12 Injection** is Australian owned and made.

**STORAGE:** Store below 25° C (air conditioning). Protect from light.
